

Data

quakes {datasets}

Analysis

I plotted the locations (defined by latitude/longitude) that had earthquakes in Fiji.

```
myLocation <- "Fiji"
myMap <- get_map(location=myLocation, source="google", maptype="roadmap",
  crop = FALSE, zoom=4)

ggmap(myMap) + geom_point(aes(x=long, y=lat), data=quakes, alpha=.3,
  color="darkred", size=1) + ggtitle("Earthquakes in Fiji") +
```
